

Finding precise Minor Planet ephemerides for use with *SPIRIT*

There are two on-line resources for obtaining accurate minor planet ephemerides.

1. The Minor Planet & Comet Ephemeris Service (MPES)

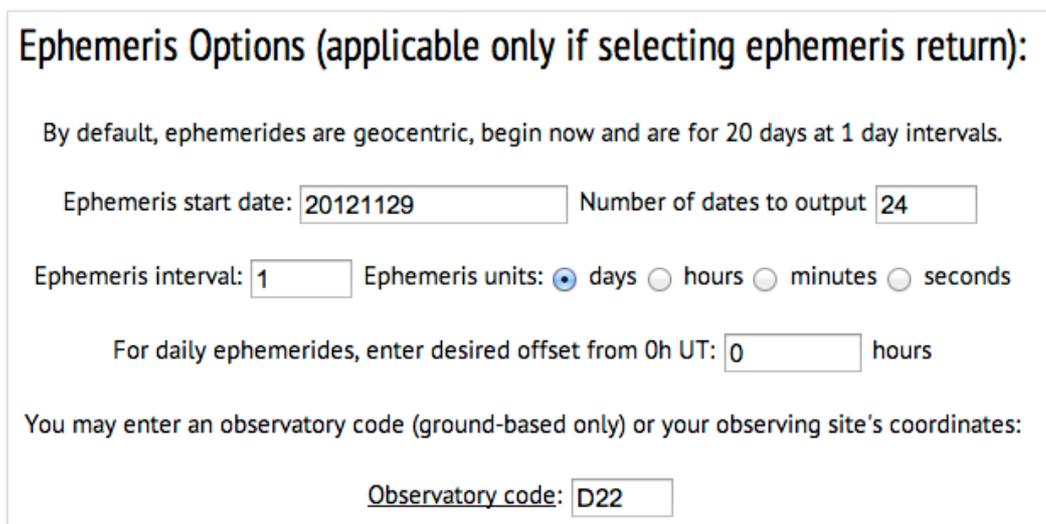

<http://www.minorplanetcenter.org/iau/MPEph/MPEph.html>

1. Enter a list of Minor Planets that you wish to observe. The MPES accepts a variety of formats.

The screenshot shows a web form with two buttons at the top: "Get ephemerides/HTML page" and "Reset form". Below the buttons are three radio buttons: "Return ephemerides" (selected), "Return summary", and "Return HTML page". A text instruction reads: "Objects may be identified by designation or by name. Enter a list of designations or names below (one entry per line, excess entries will be ignored):". A text input field contains the following text:
131186
2010 OE100
Olympia
909

2. Enter the date, number of required output dates, ephemeris interval and units. Ensure the Observatory Code is entered as D22 for *SPIRIT*.

Ephemeris Options (applicable only if selecting ephemeris return):

By default, ephemerides are geocentric, begin now and are for 20 days at 1 day intervals.

Ephemeris start date: Number of dates to output:

Ephemeris interval: Ephemeris units: days hours minutes seconds

For daily ephemerides, enter desired offset from 0h UT: hours

You may enter an observatory code (ground-based only) or your observing site's coordinates:

Observatory code:

The previous query will return 24 entries for each object, one for each our hour starting at 00:00 hour UT for the 29th November 2012.

(582) Olympia

[Display all designations for this object](#) / [Show naming citation](#) / # of variant orbits available = 3

Perturbed ephemeris below is based on 35-opp elements from *MPO* 267708. Last observed on 2013 Aug. 10.

Discovery date : 1906 01 23

Discovery site : Heidelberg

Discoverer(s) : Kopff, A.

2. The JPL Small-Body Database

<http://ssd.jpl.nasa.gov/horizons.cgi>

1. Enter details for Target Body, Observer Location and Time Span by selecting **change** for each item.

HORIZONS Web-Interface

This tool provides a web-based *limited* interface to JPL's [HORIZONS](#) system which can be used to generate ephemerides for solar-system bodies. Full access to [HORIZONS](#) features is available via the primary [telnet](#) interface. [HORIZONS](#) system [news](#) shows recent changes and improvements. A [web-interface tutorial](#) is available to assist new users.

Current Settings

Ephemeris Type [\[change\]](#) : **OBSERVER**
 Target Body [\[change\]](#) : **Asteroid 1196 Sheba (1931 KE)**
 Observer Location [\[change\]](#) : **UWA Observatory, Crawley [D22] (115°49'00.0"E, 31°58'44.0"S, 24.4 m)**
 Time Span [\[change\]](#) : **Start=2012-11-29, Stop=2012-11-30, Step=1 h**
 Table Settings [\[change\]](#) : *defaults*
 Display/Output [\[change\]](#) : *default (formatted HTML)*

2. Select **Generate Ephemeris**.

The above example gives the following:

```

In both cases, the RA and Dec coordinates for the designated date and time can be used in the *SPIRIT* browser interface, or in ACP Plans. For example, if you wished to image the asteroid 1196 (Sheba) at 9pm local time, you could use the coordinates for 01:00 UT in the above table:

RA = 03 56 38.08

Dec = +00 20 30.2
