Taking a photo with SPIRIT- Beginner Module

Program overview		
Lessons required – 2		
In this sequence of lessons students will choose deep space objects and photograph them using the SPIRIT telescopes		
There are many other possible	add on lessons, see extra activities listed in each lesson.	
This program fits into the year	7-10 Science and Digital Technologies curriculums. It is designed to develop STEM skills through open-ended	
and real life experience.		
Skills focus:	Required resources:	
 Understanding 	Device (laptop, computer) with internet access	
celestial coordinates	Stellarium – (free software) <u>http://stellarium.org</u>	
and the meridian line	A FTP program (recommended free software Filezilla <u>https://filezilla-project.org</u>)	
Choosing an	FITS liberator – (free software)	
appropriate deep	https://noirlab.edu/public/products/fitsliberator/	
space object to view	If you are choosing to process your images:	
Coding (optional- only	Photoshop or a free photo processing software such as GIMP	
if using live viewing)		
STEM skills		
o Problem		
solving		
 Critical 		
analysis		
 Independent 		
thinking		
 Digital literacy

Science		
Energy transfer through different mediums can be explained using wave and particle models (ACSSU182) Year 9		

International Centre for Radio Astronomy Research

Government of Western Australia Department of the Premier and Cabinet Office of Science

1

The universe contains features including galaxies, stars and solar systems, and the Big Bang theory can be used to explain the origin of the universe (ACSSU188) Year 10

Science Inquiry Skills – year 7-10

- Questioning and Predicting ٠
- Planning and Conducting
- Processing and Analysing Data and Information
- Evaluating
- Communicating

Digital Technologies – year 7 – 10

- Collecting, managing and analysing data ٠
- **Digital implementation** .
- Creating solutions •

General capabilities:

Lesson 1 (60 minutes)

Numeracy

•

ICT capabilities

Critical and creative thinking

Questioning and Predicting:

- 1. Introduce students to celestial coordinates. Information found here. A helpful video: **Prerequisites:** https://www.youtube.com/watch?v=WvXTUcYVXzI Internet connected 2. Introduce magnitude of celestial objects and what it means. Information can be found here. laptop or computer 3. Students practice using Stellarium by filling out the Celestial Object- Stellarium Information for students worksheet individually or in groups. More information on how to use Stellarium and set up the Stellarium correct place, date and time can be found here. downloaded
 - 4. With the information they have gathered so far, students should write a question or a hypothesis on a post it note about what they want to use the telescopes for. E.g. What is the difference between a galaxy and a nebula? What is the best exposure time for an object with a magnitude of 14 or more?

Investigation planner	
photocopied	Planning and Conducting:
	5. Once students are comfortable using Stellarium, use their questions or predictions from the last step,
Teachers may want to	to begin finding deep space objects they want to view. Use the investigation planner to set any
familiarise themselves with	parameters of the objects they can view.
the Stellarium program	Using the parameters students can choose a number of objects to view using Stellarium.
before using in class.	Tips on how to choose an object can be found <u>here</u> and exposure information can be found <u>here</u> .
	6. Individually or in groups, students fill out the investigation planner. Encourage students to try
Teachers need to choose	different types of exposures, filters etc or to take their images on more than one telescope so there
between live viewing,	is a range to compare and choose from.
scheduling or a mixture of	7. Use <u>SPIRIT</u> to get images by:
both.	a) Live viewing- If you are using live viewing and would like students to create a plan to practice their
	coding skills use the information <u>here</u> .
	Please note: If using live viewing teachers need to book the appropriate time on <u>SPIRIT 2</u> . Students or
	teachers will need to log in at the requested time to complete their viewing plan and live viewing.
	<i>b)</i> Scheduling- If you are using the scheduler then students should follow the instructions <u>here.</u>
	Please note: Students or teachers will need to include an email address in the schedule browser section of
	the web interface to make sure they get notified when the images are ready.
	Extra activities:
	a) Science as a Human Endeavour- Investigate the Scientists behind the astronomical catalogues. A
	good place to start would be Charles Messier behind the Messier Catalogue or the contribution of
	the Herschel siblings to the New General Catalogue.
	b) Compare and contrast – Use the SPIRIT telescope information sheet to compare and contrast the
	features of the different telescopes. This can also be useful when deciding which telescope to image
	with.

Lesson 2 (60 minutes)	Processing and analysing data and information:
Prerequisites:	1. Students should use FTP to access their images. Instructions on how to use Filezilla are found here.
FTP software	If you are composing a colour image use the instructions <u>here</u> for photoshop. GIMP is also an option
• If compiling images- a	for free software.
photo editing	Evaluating:
software such as	2. Once the images are accessed or compiled, ask students to rate their images using the SPIRIT image
photoshop or GIMP	evaluation form, SPIRIT investigation planner or both. Focus on critical thinking and ideas on how to
	improve their imaging. They may ask group members or other peers for feedback.
If using SPIRIT 4 and 6,	If there is time in your program, students can use the opportunity to reimage their object with the
teachers will need to ensure	changes. Again, encourage them to experiment with exposure times and filters to see what gives the
that the photos have been	best outcome.
taken by checking the	3. Examine the pictures for features such as constellations, colours, clouds of gas or anything else that
scheduler (don't forget to	may be of interest.
input email addresses so you	4. Watch this video to explain the way the SPIRIT filters work and what colours in space mean:
get a notification when the	https://www.youtube.com/watch?v=WSG0MnmUsEY_
images are ready)	Communicating:
	At the teacher's discretion students can publish their photos for the wider astronomy community.
	Some places to do so are:
	ICRAR's SPIRIT photo of the year competition (watch <u>icrar.org/spirit</u> for more information)
	Astrofest Astrophotography exhibition and competition (watch <u>www.icrar.org</u> for more information)
	Astronomy.com's community gallery (<u>http://cs.astronomy.com/asy/m/default.aspx</u>)
	NASA's Astronomy Picture of the Day website (<u>https://apod.nasa.gov/apod/lib/apsubmit2015.html</u>)
	Extra activities:
	a) Continue on with the SPIRIT programs. You may want to move to an intermediate or advanced
	program.
	b) For more citizen science opportunities visit <u>https://www.icrar.org/outreach-education/outreach-</u>
	initiatives/citizen-science/
What next: Now that y	our students are familiar with the SPIRIT program you may want to continue with a research project.
If you are looking for id	leas or support on how to use SPIRIT in your classroom, please contact us at any time at: <pre>spirit@icrar.org</pre>
